

Datasheet

ATP6V1G3 purified MaxPab mouse polyclonal antibody (B01P)

Catalog Number: H00127124-B01P

Regulation Status: For research use only (RUO)

Product Description: Mouse polyclonal antibody raised against a full-length human ATP6V1G3 protein.

Immunogen: ATP6V1G3 (NP_573569.1, 1 a.a. ~ 118 a.a) full-length human protein.

Sequence:

EEAMVEIDQYRMQRDKEFRLKQSKIMGSQNNLSDEIE
EQTLGKIQELNGHYNKYMESVMNQLLSMVCDMKPEIH
VNYRATN

Host: Mouse

Reactivity: Human

Applications: WB-Tr

(See our web site product page for detailed applications information)

Protocols: See our web site at

<http://www.abnova.com/support/protocols.asp> or product page for detailed protocols

Storage Buffer: In 1x PBS, pH 7.4

Storage Instruction: Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.

Entrez GeneID: 127124

Gene Symbol: ATP6V1G3

Gene Alias: ATP6G3, MGC119810, MGC119813, Vma10

Gene Summary: This gene encodes a component of vacuolar ATPase (V-ATPase), a multisubunit enzyme that mediates acidification of eukaryotic intracellular organelles. V-ATPase dependent organelle acidification is necessary for such intracellular processes as protein sorting, zymogen activation, receptor-mediated endocytosis, and synaptic vesicle proton gradient

generation. V-ATPase is composed of a cytosolic V1 domain and a transmembrane V0 domain. The V1 domain consists of three A and three B subunits, two G subunits plus the C, D, E, F, and H subunits. The V1 domain contains the ATP catalytic site. The V0 domain consists of five different subunits: a, c, c', c" and d. Additional isoforms of many of the V1 and V0 subunit proteins are encoded by multiple genes or alternatively spliced transcript variants. This gene encodes one of three G subunit proteins. Transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]
